Appraisal and Recommendation Letter: Ozgur Unver – Survey Coordinator in Kazakhstan.

To whom it may concern,

I have known Ozgur from when he started as and site surveyor for my previous company twenty years ago. He has worked many onshore/offshore projects at his carrier. He has been working as a Survey Coordinator last three years in Kazakhstan for Laser Gulf. During his assignment within Laser Gulf, he has shown an outstanding performance and professionalism in his job. His experience in Dimensional Survey, high accuracy and management are unquestionable and always exceeds our expectations.

Ozgur is an excellent personality, extremely diligent and a strong (but fair) manager of his team. His knowledge and understanding of his work scope is exemplary.

It is a pleasure to work alongside him in my team and have no hesitation in recommending Ozgur for any work scope he is assigned.

Appraisal and Recommendation Letter: Mr H.Ozgur Unver - Lead Dimensional Control and Survey Engineer.

To whom it may concern,

Ozgur has been the leader of our dimensional control effort on my last three FPSO's. Underestimating the value of effective Dimensional Control in terms of avoiding mistakes (schedule) and rework (Cost) is immeasurable.

Conceptual thinker able to identify alternative solutions is part of Ozgur's make up. This has allowed us to find significant work arounds and avoid some of the more regular mistakes made in construction.

Ozgur is an excellent personality, extremely diligent and a strong (but fair) manager of his team. His knowledge and understanding of his work scope is exemplary.

It is a pleasure to work alongside him in my team and have no hesitation in recommending Ozgur for any work scope he is assigned.

Christopher Morton
Project Delivery Manager

To who it may concern

As a project team we highlighted the need to conduct Dimensional Control and As-built Surveys as a way to reduce risks to both schedule and budget from major deliveries or mating parts not being constructed and installed within tolerance.

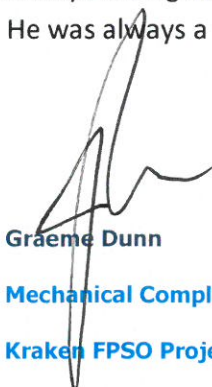

Therefore, we took out the services of Scopus Engineering, and were allocated Ozgur Unver to work with us as a dimensional control and survey engineer on Peregrino, Knarr and presently Kraken Floating Production Storage and offloading projects. His scope of work was to lead a team of surveys to complete survey on our major deliveries, and give independent verification on construction and manufacturing to reduce risk and give confidence in cases where many of the items are not actually coming together until very critical phases in the project timeline.

For example new build and conversion outfitting of the main deck with module stools, and the installation fit-up surveys and clash removal reports to allow safe and timely integration of the topsides process modules, or in the case of mating a 1000 ton buoy to a 300,000 ton FPSO until you are offshore and targeting a narrow weather window, where any error found has a direct impact in the successful hook-up on location in the oil field.

During this period Ozgur was asked to work closely with contractors, and sub-contractors, ensuring he manages his teams work and results against the schedule, as well as navigating the complex day to day dealings of completing surveys without impacting the work of the shipyard or module fabricator, showing determination from day one to push for a solution based approach.

Over the project Ozgur has become an important contributor to the project delivery, as well as a friend, with his interpersonal skills and team work with the other site members, visitors and his own team of surveyors being excellent.

Always willing to help, and assist the team, he is self-motivated to put the extra time in to complete a task. He was always a visible presence onsite, and a capable manager who just gets on with his job.

To Whome it may concern

Subject: Letter of Apprication & Recommendation

It is my pleaseure to recommend the professional services of Mr Ozgur Unver Hussain. Ozgur has worked for us as subcontractor through his company for seveal years on various projects in Asia.

He has been directly in charge of a survey team performing required tasks as per project requements and always to the highest level of competency. During this time, I have always found hime to be well qualified in all aspects of survey work for fabrciation of piping and structures. He is a reliable and highly motivated person who fits in and works well with an integrated site PMT.
